## Architecture

Our entire data source is our google sheets. This file is connected to the google looker studio server. From the server, data can be shown and accessed. The functionalities show the result according to query entered by the end user or client. Client entered the query to show the graph, after selecting the data in form of rows and columns it will go inside the google looker server. Based on recommended charts, client can make the visual aspect of the same. If client is not satisfied with the result, he/she has to select data accordingly otherwise make required changes to show the expected result.
